NEXA V3.24 — MASTER FEATURE SPECIFICATION

Complete feature inventory and master-app build record

Current master version: V3.24.0 — AI Tool Layer / Master Build

NEXA combines personal finance, shared money groups, Zeeza social communication, Dream Marketplace commerce, vendor operations, staff management, AI utilities and notification routing.

AI / Utility Layer

AI chat; price checking; comparison; image-based scam checking; transcription; spoken AI responses; controlled master-app navigation.

AI Tool Layer — V3.24

Authenticated read-only tools for profile, money summary, Dream Marketplace orders and vendor summary. Tool requests are allowlisted and limited per AI turn. Live results are supplied before personal-data answers; missing values must not be invented.

Voice Architecture

Current flow: mobile recording → /api/transcribe → /api/chat → /api/speak → spoken response. Realtime speech-to-speech remains a later build phase.

Master App

Home, Money, Zeeza, Dream Marketplace and Profile; Money mounts Groups; Zeeza mounts Friends and Chat; Marketplace preserves /api/mall/*; Vendor Staff master route.

Build Workflow

One master project ZIP is maintained. The master feature specification stays embedded and is updated with major build milestones. Testing is deferred; future corrections are made directly in the same master project.

Roadmap

V3.25 Confirmed AI Actions; V3.26 AI Marketplace; V3.27 Notifications; V3.28 Realtime Voice; V3.29 Production Hardening; V3.30 Release Candidate.

Version History

V3.17 Zeeza; V3.18 Dream Marketplace branding; V3.19 master shell; V3.22 AI Core/voice; V3.23 startup AI foundation; V3.24 AI Tool Layer and single-master workflow.

NEXA V3.25 — CONFIRMED AI ACTIONS

V3.25 adds an application-controlled confirmation layer for consequential actions prepared by NEXA AI.

Action flow
User voice/text → NEXA understands → NEXA prepares an allowlisted action → NEXA displays the consequence → user explicitly confirms or cancels → server re-validates → application executes.

Implemented actions
Cancel Dream Marketplace order; mark a debt as settled; send a friend request; unfriend; block a user.

Safety controls
AI cannot directly execute a consequential action. Pending actions are short-lived, bound to the authenticated user, and consumed once. The server re-checks ownership and current state before execution. Payment, purchase, transfer, account deletion and other high-impact operations remain outside this version.

Build rule
V3.25 remains part of the single continuously edited NEXA master project. Testing remains deferred and any future findings will be corrected directly in this same master project.
